

## Security and privacy in an e-business world.

## Ensuring security and privacy in today's healthcare industry.

Throughout the world, healthcare organizations are adopting e-business models and systems to improve patient care and streamline the integration and coordination of services. As a result, the security and privacy of sensitive patient health information is under increasing scrutiny. IBM's comprehensive security and privacy solutions help healthcare organizations meet the complex requirements for data protection and compliance. IBM's solutions help healthcare organizations protect the security and privacy of sensitive patient information.

In the United States, the Department of Health and Human Services has issued a privacy regulation for the healthcare industry, which requires the use of security and privacy controls to protect the health information of patients. IBM's solutions help healthcare organizations meet the requirements of the regulation.

IBM can help you protect your organization's sensitive information and ensure that your e-business solutions meet the security and privacy requirements of your industry.
